

Firebase Hosting

Kelvin Gobo
@kelvingobo

Key capabilities

Served over secured connection

Fast content delivery

Rapid deployment

One-click rollbacks

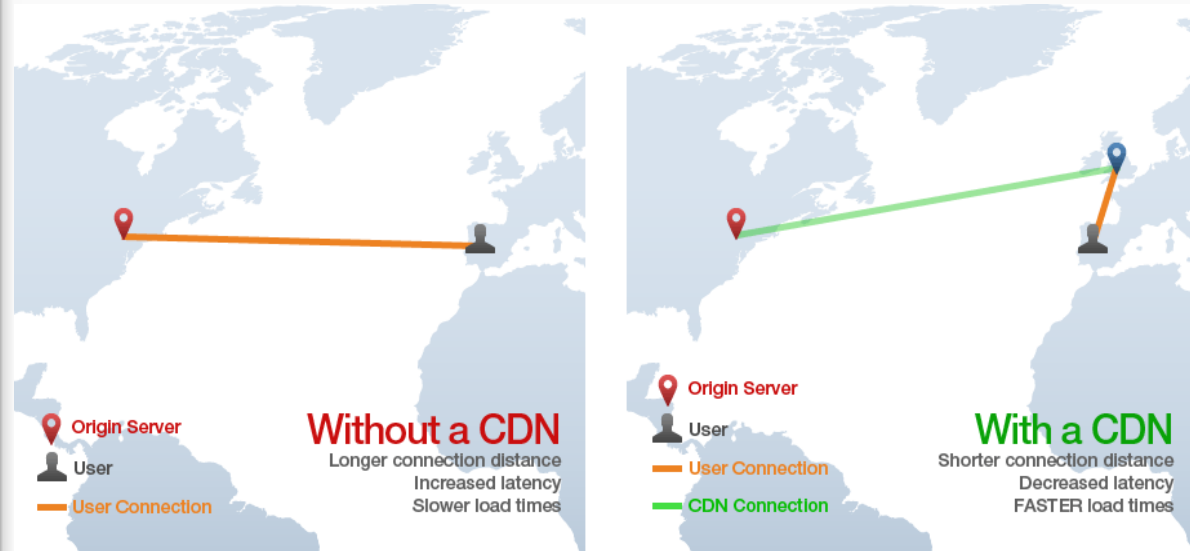

Served over secured connection

Ensures your content is always delivered securely

Zero-configuration SSL built-in

Fast content delivery

Each file is cached on CDN edges around the world

Rapid Deployment

Get your app up and running in seconds

Deploy **only** specific parts of your app

One-click rollbacks

Quick deployments are great!

Being able to rollback to a
previous version is even better

Each deploy made is a version

So how can I host my website on
firebase?

You will need:

Npm which comes with Node.js - `https://nodejs.org/en/`

Firebase Command Line Interface(CLI) - `npm -g install firebase-tools`

Login to firebase - `firebase login`

Setup your project to deploy - `firebase init`

Run command to deploy - `firebase deploy`

In summary:

- Content served on a secure connection
- Fast Delivery
- Rapid Deployment
- One-click rollbacks
- How to host your site on firebase

Thanks!
